

Bighorn Basin temperature proxies and orbital-scale insolation

Proxy and astronomical ages share the Ma axis; the orbital solution is not tuned to the BHB temperature data

A Bighorn Basin temperature proxies

Black curve: CFB D47 model; vertical bars show aggregate age ranges

○ CFB soil carbonate D47 △ MCP soil carbonate D47 □ Wing leaf-margin MAT ◇ Fricke and Wing MAAT

B Modeled astronomical forcing

ZB20a(1,1); grey interval marks less-secure phase (>58 Ma)
