

CFB alteration probability in T_{47} - $\delta^{18}\text{O}$ space

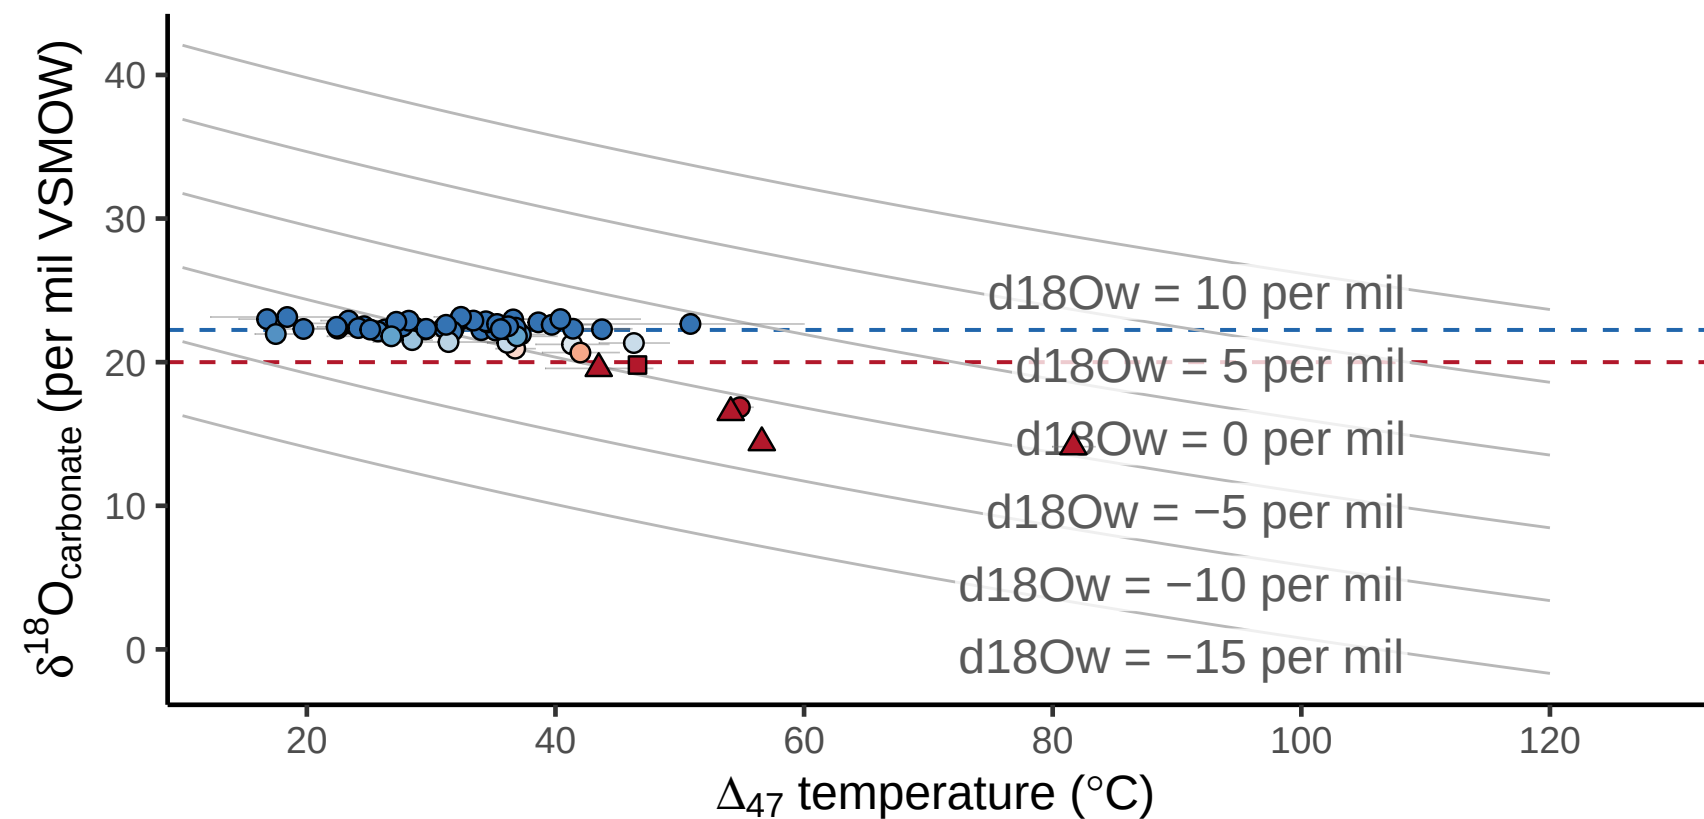

Point fill is based only on d18Ocarb: 5% at the pooled BHB mean (22.24 ‰)

Modeled probability
of alteration

0% 25% 50% 75% 100%

Carbonate material $\square$ Altered carbonate $\circ$ Pedogenic micrite $\triangle$ Spar

line = 95% alteration-probability anchor. This is a trajectory index, not a calibrated posterior probability.
