

Provisional distribution of unevaporated input-water d18O

Equal sample weighting; only horizons with paired triple-oxygen and measured clumped-isotope data

Soil slope prior Passey-Ji lake polynomial Ben-adjusted lake polynomial

Sensitivity analysis, not a production paleoprecipitation estimate.

Soil prior: $\lambda \sim N(0.520, 0.0015)$, truncated to 0.518–0.524; MWL Delta-prime-17O = 32 $\pm$ 5 per meg.
