

Mean Monte Carlo burial path and $\delta^{18}\text{O}$ simulation envelopes

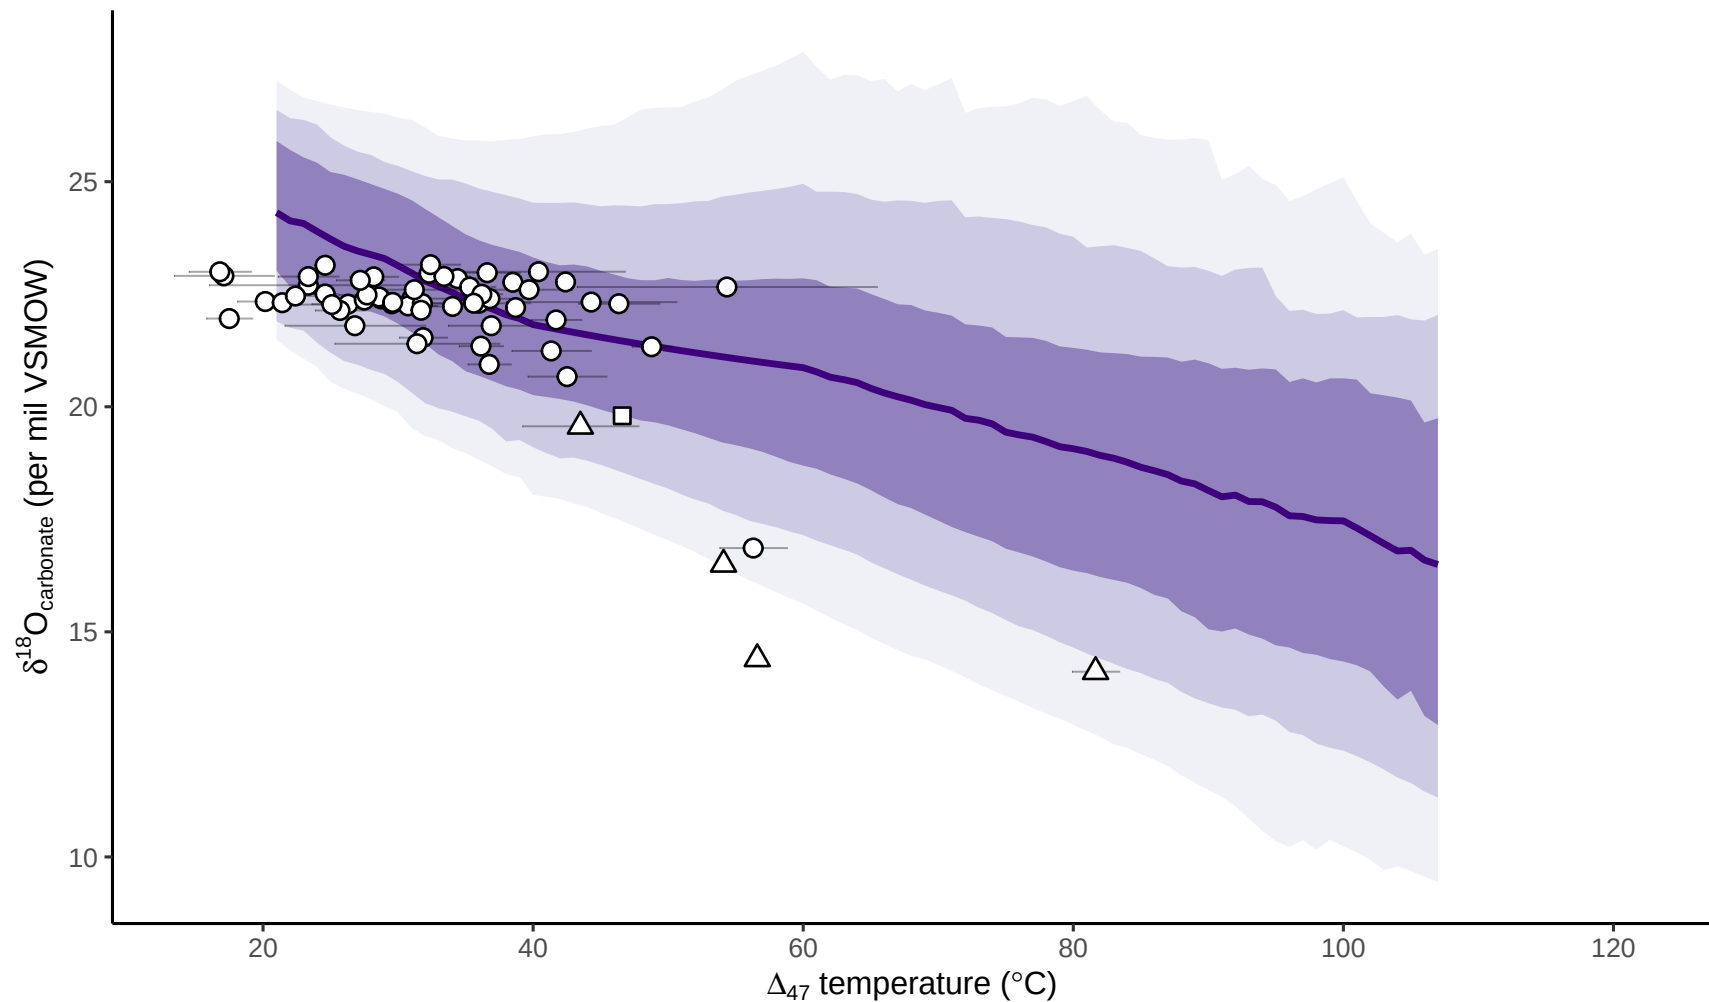

Line is the ensemble mean; nested bands contain the central 50%, 80%, and 95% of simulated paths at each temperature

Central simulation interval

50%	80%	95%
-----	-----	-----

Carbonate material

□	Altered carbonate	○	Pedogenic micrite	△	Spar
---	-------------------	---	-------------------	---	------

Intervals summarize the specified uniform parameter ranges and are not fitted confidence intervals; at least 100 paths support each temperature.
