

North American continental temperatures in PhanDA context

Stage-resolved published constraints are sparse in the Thanetian and numerous in the Ypresian

Published North American continental estimates

Wing et al. (2000) LMA

◇ Fricke & Wing (2004) phosph

Fricke & Wing (2004) paleobotanical MAT

△ West et al. (2020) ensemble

PhanDA stage-level surface-air temperature: median line, 16–84% circles: screened BHB soil-carbonate T47; filled triangles: Kelso et al. published continental MAT estimates. Error definitions differ by source. West et al. high-latitude sites reported only as late Paleocene to early stage. West latitudes are modern geographic coordinates; other paleotemperature and MAT are not equivalent targets.
