

Paired host-spar T_{47} - $\delta^{18}\text{O}$ trajectories

Solid curve: equilibrium heating at constant host-inferred water $\delta^{18}\text{O}$

Dashed arrow: spar offset requiring water evolution

Carbonate fabric ● Host matrix ▲ Spar

Horizon ● PK95-SC-4

Calcite-water fractionation: Kim and O'Neil (1997).
Trajectories are equilibrium references, not fitted burial histories.
