

Bighorn Basin temperature models and orbital-scale insolation

MAT and carbonate formation temperature are modeled separately; the orbital solution is not tuned to either proxy record

A Mean annual air temperature

Wing LMA; 80% and 95% Monte Carlo intervals

B Soil-carbonate formation temperature

This study versus published data; 80% and 95% intervals

Dataset ○ Published data ● This study

C Modeled astronomical forcing

ZB20a(1,1); grey interval marks less-secure phase
