

# Mean Monte Carlo burial path and $\delta^{18}\text{O}$ simulation envelopes

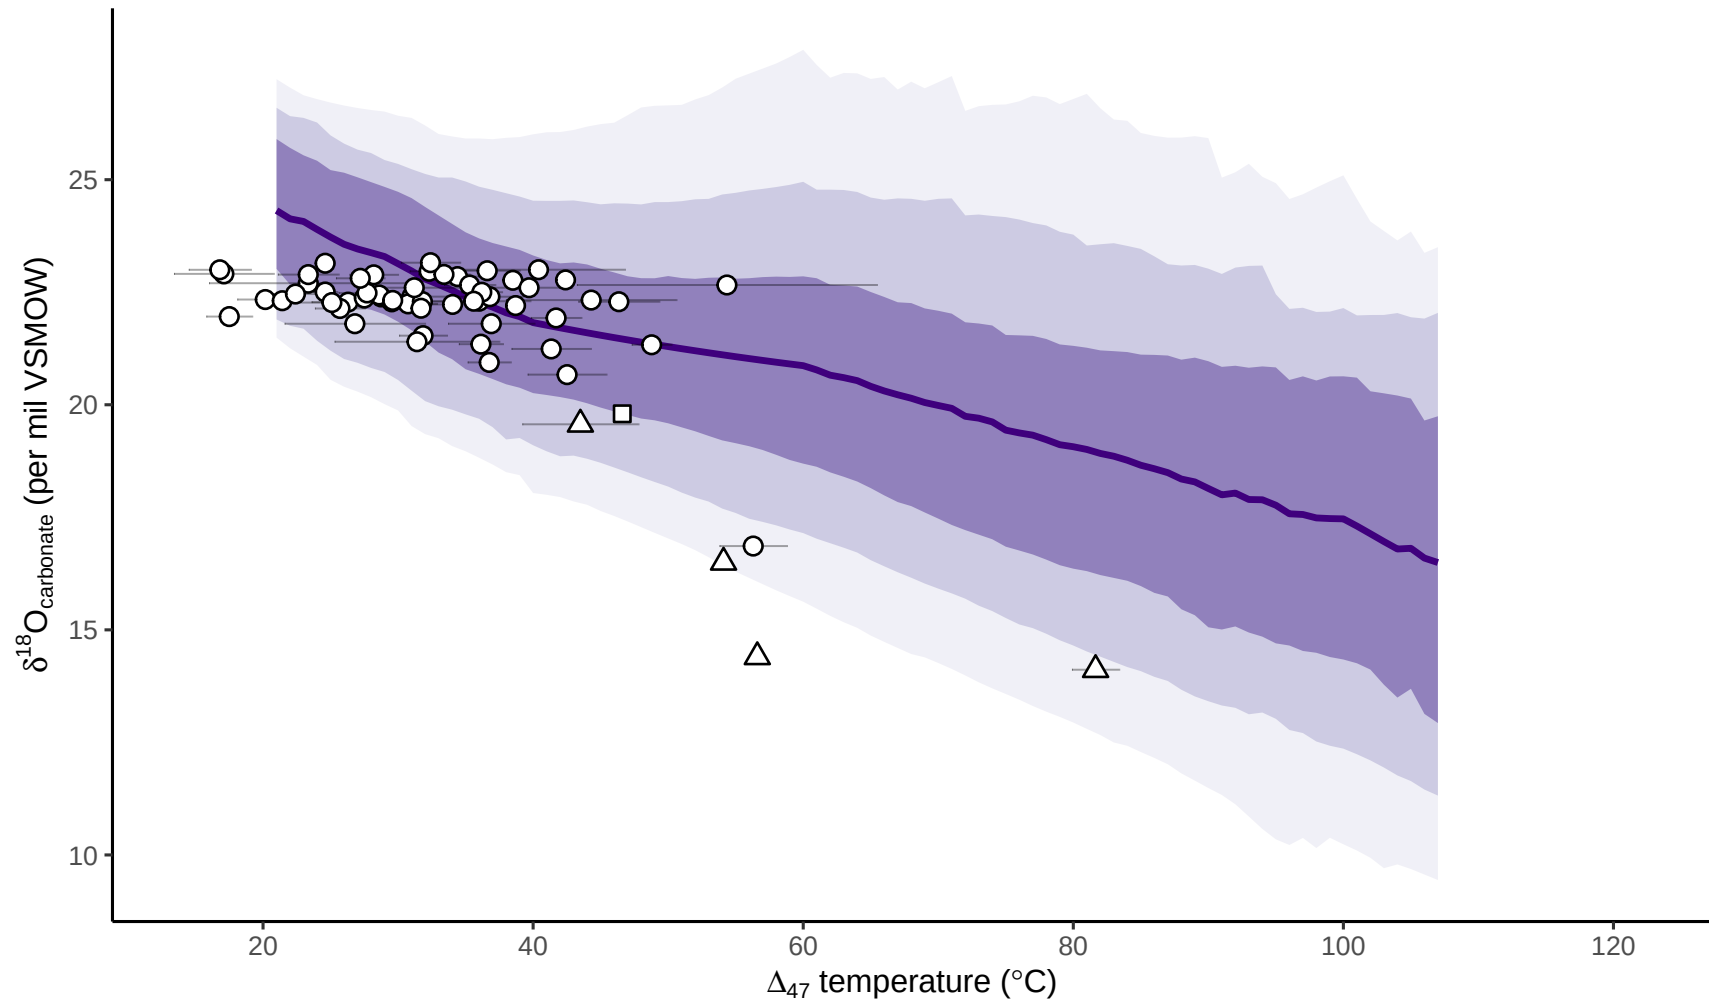

Line is the ensemble mean; nested bands contain the central 50%, 80%, and 95% of simulated paths at each temperature

Central simulation interval

|     |     |     |
|-----|-----|-----|
| 50% | 80% | 95% |
|-----|-----|-----|

Carbonate material

|   |                   |   |                   |   |      |
|---|-------------------|---|-------------------|---|------|
| □ | Altered carbonate | ○ | Pedogenic micrite | △ | Spar |
|---|-------------------|---|-------------------|---|------|

Intervals summarize the specified uniform parameter ranges and are not fitted confidence intervals; at least 100 paths support each temperature.
