

CFB carbonate $\delta^{18}\text{O}$ versus T_{47}

Grey curves show constant calculated parent–water d18O (per mil VSMOW)

Alteration likelihood ● High ● Moderate ○ No indication ● Not assessed ● Possible

Carbonate material □ Altered carbonate ○ Pedogenic micrite △ Spar

T47–d18O framework: Henkes et al. (2018). Calcite–water fractionation: Kim and O'Neil (1997).
