

Continental and marine temperature trajectories, 59–54 Ma

Shared age direction; independently estimated curves are not tuned

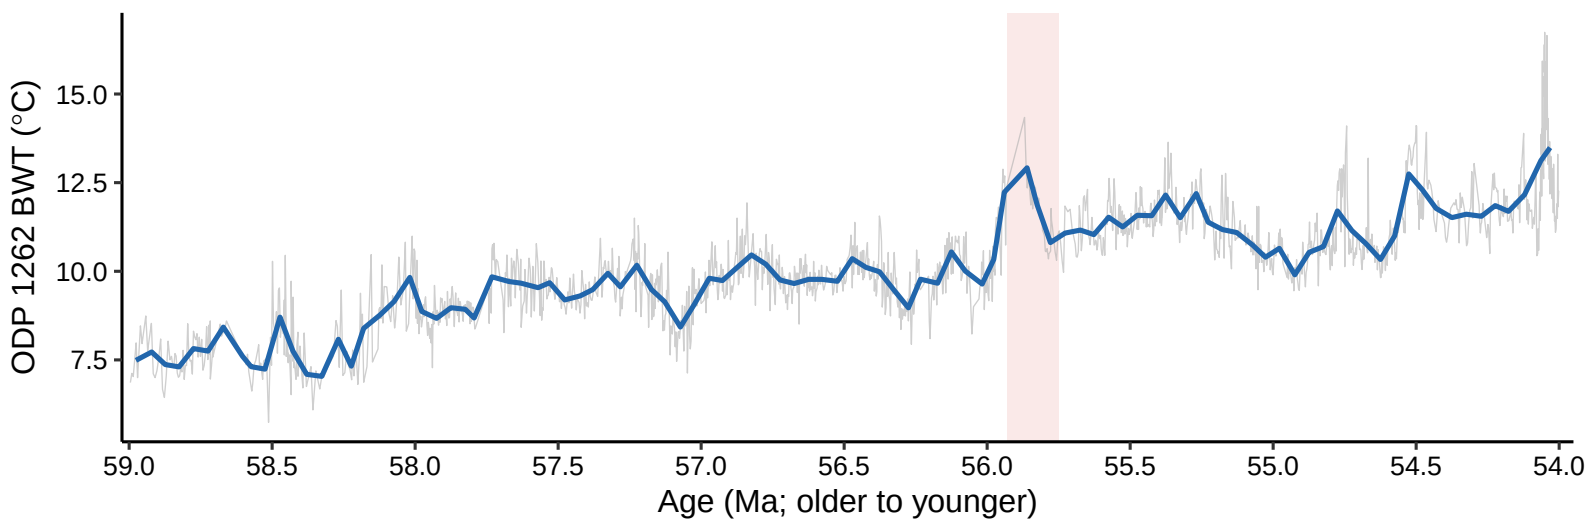

A CFB pedogenic-carbonate temperature

Only observations retained by the temperature-model screen; red = REML smooth $\pm 95\%$; dashed = weighted linear fit

B South Atlantic deep-ocean temperature

Grey = observations; blue = 50-kyr means; deep-ocean context, not a direct CFB analogue

CFB band is uncertainty in the fitted conditional mean, not total proxy, age-model, seasonal, or preservation uncertainty. Barnet et al. (2019), ODP Site 1262; PANGAEA
