

CFB alteration probability in T_{47} - $\delta^{18}\text{O}$ space

Point fill is based only on d18Ocarb: 5% at the pooled BHB mean (22.25 per mil) and 95% at 20 per mil

Modeled probability
of alteration

Carbonate material $\square$ Altered carbonate $\circ$ Pedogenic micrite $\triangle$ Spar

... = pooled BHB micrite mean; dashed red line = 95% alteration-probability anchor. This is a trajectory index, not a calibrated posterior probability.
