

Mean Monte Carlo burial path and $\delta^{18}\text{O}$ simulation envelopes

Line is the ensemble mean; nested bands contain the central 50%, 80%, and 95% of simulated paths at each temperature

Central simulation interval 50% 80% 95%

Carbonate material $\square$ Altered carbonate $\circ$ Pedogenic micrite $\triangle$ Spar

Intervals summarize the specified uniform parameter ranges and are not fitted confidence intervals; at least 100 paths support each temperature.
